

What is geography?

KEY CONCEPT: Time, place and space

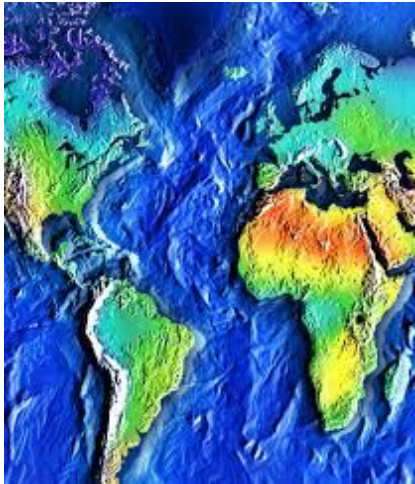

GLOBAL CONTEXT: Orientation in space and time

Write this down!

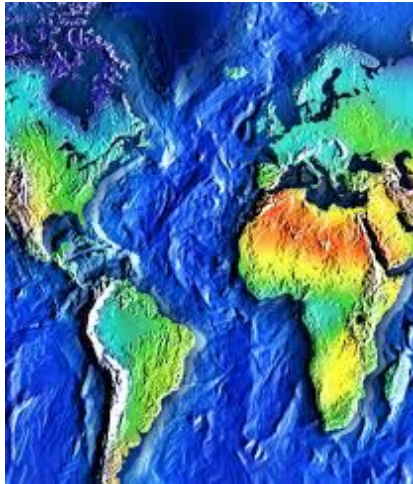

In geography we are concerned with where places are and why they are where they are.

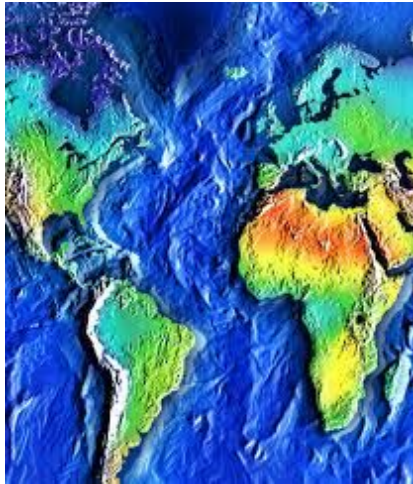

Physical geography studies the physical features and environments of the Earth. For example, volcanoes, earthquakes, climate and rivers.

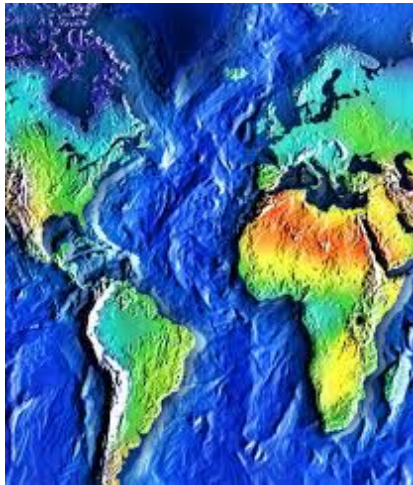

Human geography is the study of where and how people live, things made by people such as roads and towns For example, settlements, population, industry and jobs.

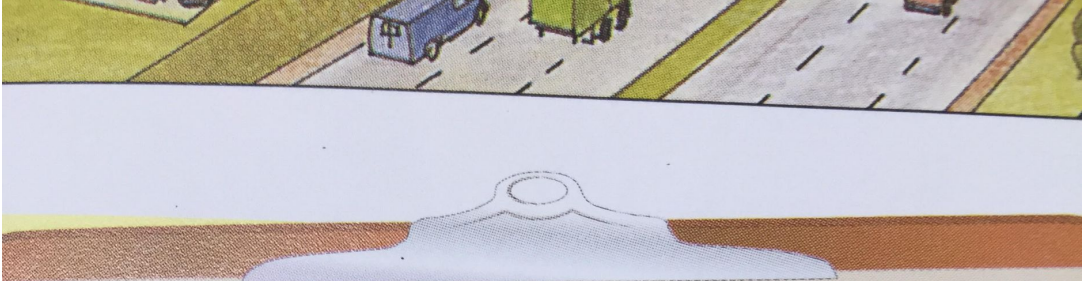

Environmental Geography is the study of how we affect our surroundings. The impact man has on the environment. The environment may be improved or destroyed.

Burning fossil fuels leads to higher levels of Carbon Dioxide (CO₂) in the atmosphere, which causes global temperatures to rise (global warming), which can destroy habitats

- 
- Looking for work
 - Traffic jams in city centres
 - Reasons for places to be crowded
 - Problems in city centres
 - How rich people are
 - Land use in a city
 - Immigrants moving into Britain
 - Why few people live in desert areas
 - Different beliefs and ways of life
 - The location of shopping centres
 - Why the UK is richer than Kenya
 - Car making industry
